SUMMARY

Frontend Engineer with 4+ years of experience building **Angular** and **TypeScript** applications. Core contributor to a new feature within a **microfrontend-based** cybersecurity platform, developing data-driven UI components and reusable elements for a shared library. Seeking to bring this experience to a frontend role across **Angular** and **React**, focusing on scalable and maintainable solutions.

SKILLS

Frontend: Angular, React, TypeScript, JavaScript (ES6+), RxJS, REST APIs

Architecture: Microfrontends, Feature-based, Component-based, Service-driven, Monorepo

Styling: HTML, SCSS, Angular Material, Bootstrap

Testing: Jest, Jasmine

Tools & Workflow: Git, Jira, ESLint, SonarQube, GitHub Copilot

Languages: English (C1) | Ukrainian (Native) | Russian (Native)

WORK EXPERIENCE

2022 - 2025

Frontend Engineer | GlobalLogic, Poland

- Built and scaled a new feature within a microfrontend architecture from an initial single-page implementation to a multi-view workflow (incident list, details, metrics, settings), supporting increasing product complexity
- Implemented advanced data table functionality (filtering, bulk actions, status updates), enabling efficient incident handling within the platform
- Designed and integrated a reusable filtering mechanism, aligned with internal component library standards, enabling reuse across modules and future features
- Refactored Angular modules and component structure, decoupling logic into smaller components and improving maintainability and scalability
- Took ownership of feature delivery, clarifying requirements and driving implementation end-to-end
- Established frontend presence on the client project as the first engineer from the outsourcing team, contributing to a successful client engagement and subsequent team expansion

Frontend Engineer | GlobalLogic, Ukraine**2021 - 2022**

- Extended a configurable UI system by developing reusable components used to compose client-specific application views
- Strengthened application stability by diagnosing and resolving defects across core features in an enterprise ticket management system
- Improved reliability and test coverage by writing and maintaining unit and end-to-end tests

Junior Frontend Engineer | Admixer, Ukraine**2020 - 2021**

- Implemented features for a web-based video player, including ad timing and display logic
- Improved legacy code through targeted enhancements and defect resolution, supporting more stable application behaviour
- Reduced risk of regressions by maintaining and extending unit tests for existing functionality

Junior Java Engineer | Vantino, Ukraine**2018 - 2019**

- Contributed to backend development within a microservices architecture, supporting core functionality of a social platform built with Java and Spring Boot
- Supported data management and application setup, working with PostgreSQL and configuring server environments
- Improved performance and stability of backend services through debugging and optimisation of existing code

EDUCATION**Master's Degree in Computer Engineering****2016 - 2018**

National Technical University of Ukraine 'Kyiv Polytechnic Institute'

Bachelor's Degree in Computer Engineering**2012 - 2016**

National Technical University of Ukraine 'Kyiv Polytechnic Institute'
